This link will eventually open the worldwide skyvector IFR site in any browser provided 8080 is open

Need to adjust the map browser code to use the skyvector url instead

code map browser in menubar.xml is :

```
<item>
                <name>map-browser</name>
                <binding>
                        <command>nasal</command>
            <script>
             var n = props.globals.getNode("/sim/http/running");
             if( props.globals.getNode("/").getValue("sim/http/running",0) != 1 ) {
              gui.popupTip("Internal webserver not running. Restart FlightGear with -httpd=8080", 5.0);
             } else {
              var _url = "http://localhost:" ~ getprop("/sim/http/options/listening-port") ~ "#Map";
              fgcommand("open-browser", props.Node.new({ "url": _url }));
             }
            </script>
                </binding>
        </item>
```

SkyVector url is

https://skyvector.com/?ll=47.458055556,8.548055556&chart=302&zoom=3
